

Proposal for Pokémon Website

Concept and Purpose

The Pokémon website is a simple and engaging site where users can explore Pokémon content. It will include a Pokédex with Pokémon details and a game page featuring a whack-a-mole-style Pokémon game. The focus is on providing a clean, user-friendly experience.

Design

The website uses a cohesive Pokémon-inspired color scheme with bright tones like yellow and blue. Fonts like "Bebas Neue" ensure a modern look. Each page includes a header, navigation bar, main content area, and footer. The layout will be responsive using flexbox and grid.

Animation

When users hover over Pokémon images, they will slowly scale up, providing a smooth and engaging zoom-in effect. This animation enhances interactivity while maintaining simplicity.

Interactivity

Game Page: Users click moving Pokémon to earn points.
